Teaching Evaluations

Average TA Evaluation Score: 7.65/9.

Selected Student Comments:

- *She was very dedicated to the students, and I felt very comfortable asking for help whenever necessary. You can tell that she cares deeply about students' understanding of the class concepts. Her teaching approach was very good, as we did problems in section to solidify our learnings from class.*

- *J. Liu is a very helpful TA and she really tires to help all her students succeed in the course. I felt like she actually cared about us and was a very knowledgeable TA herself. I would recommend her to any of my peers as a resource. She truly is one of the TA's that cares for her students and wants to see them succeed.*

- *She's very nice and understanding and knowledgeable about the materials taught in this class.*

The following pages provide detailed evaluation scores and comments from my students. Pages 2, 30, 58, and 87 mark the beginning of each TA evaluation report. I have also attached the course syllabus at the end for reference.

I served as a teaching assistant for Macroeconomic Theory (ECON 102), an upper-division undergraduate course with approximately 400 students. This course is particularly innovative and challenging, introducing modern macroeconomic models to undergraduate students by simplifying the mathematics to an accessible level while preserving the underlying economic intuition. It also emphasizes the ability to formulate economic questions and translate economic ideas into mathematics, rather than merely solving already well-defined problems. This experience has significantly shaped my teaching philosophy for undergraduate education.

Comments
She was very dedicated to the students, and I felt very comfortable asking for help whenever necessary. You can tell that she cares deeply about students' understanding of the class concepts. Her teaching approach was very good, as we did problems in section to solidify our learnings from class.
J. Liu is a very helpful TA and she really tires to help all her students succeed in the course. I felt like she actually cared about us and was a very knowledgeable TA herself. I would recommend her to any of my peers as a resource. She truly is one of the TA's that cares for her students and wants to see them succeed.
He's very nice and understanding and knowledgeable about the materials taught in this class.
I only went to discussion a few times but every time I went the TA was very helpful, answered all my questions, and knew what they were talking about.
Strong grasp of concepts, but struggled to communicate the most important central ideas. Exercises done in section often had little relation to coursework.
Kind grader and communicative.
Strengths: patient, proactive in teaching, willing to help students, knowledgeable in the field Weakness: sometimes overcomplicates some topics, such as howthe Solow equation is derived algebraically
I did not attend sections.
I appreciated Assistant Liu's long and abundant office hours that made it extremely easy to reach her out of the classroom. I found her TA material to be very well written as they focus on core ideas of the varying topics that proved to be immensely helpful in preparing for exams. I enjoyed how she presented her own perspectives on the topics that were different from the professor as it allowed me to view the problems from multiple angles. I suppose the mathematical steps written on the chalkboard may have been too fast paced at times that were not accompanied by further investigation. Nonetheless, Assistant Liu is extremely knowledgeable on the subject and I thoroughly enjoyed having her as my teaching assistant.

Comments
The TA gave very useful practice problems that helped further understanding of the course material. When the TA solved the problems, it definitely made things click for me. I do think the TA did go a bit fast due to how much material needed to be covered in a short amount of time so I did get confused sometimes watching the TA do some of the practice problems.
Thank you for always preparing these helpful materials! You always explain things very clearly.
NA
n/a
This TA is very organized and communicative with students and seems very knowledgable about the topics covered in class, and is always willing to assist students.
Janet was a good TA. She sometimes went off topic and did not explain things in the most clear way but she was overall a good TA.
Well prepared every week and often communicated via email any course updates. Generally, attending sessions helped understanding of the content, but sometimes made things more confusing. For example, the Solow derivation during discussion felt overly complicated. Also, it would be helpful if the answers to the discussion problems were provided for later review/to catch up if absent due to sickness.
It was overall good, standard econ TA section. Very thorough, straight to the point, which I think is good for what this is. Maybe could improve communication a little bit, make it more digestible.

She was great!
N/A
This TA was very persistent in sending out emails and announcements which enabled me to stay up to date in what each discussion was going to look like each week.
Is unclear. Does not know how to explain concepts. Wastes time going over completely irrelevant material. Would not recommend as a TA.
Pretty solid, I wish there were better practice questions coming from class lectures and past exams
good
She communicated very well but I do not feel like the material we went over was very helpful.
Excellent dissection of material
very coherent
Sometimes the explanations seemed to be even more complex than what was covered in class, but for the most part were always on point. The TA always was open to providing clarification and was a fun presence.

Comments
I did not attend this session.
Did not attend enough to make a good comment, but the TA always communicated via canvas notifications and showed concern for students. Updated whenever there is an office hour change or anything related to that. Good communication.
n/a
Very responsive and communicative. Was able to ask for help outside of sections. Some of the discussion section questions were different formatting than what is usually given on tests.
Overall, I felt as if she was expanding too much. The week of the midterm she had us doing something that was no where close to what was on the midterm. I also had some difficulty understanding what she was trying to convey.
Strength: Instead of rehashing what the professor did in class as other TA's seem to do, this section's TA focussed on applying the lecture to problems solving which helps to prepare for exams, which I appreciate.
The advantage is that it has genuinely helped me with many additional issues I didn't understand. I don't see any disadvantages.
Cares about her students
Very kind, friendly, and a great communicator! Always sent valuable information through the Bruinlearn announcements so I never missed out on anything.
Great TA

Econ 102: Macroeconomic Theory

Winter 2026

Instructor:	Chris Surro	**Time:**	M/W 2:00-3:15
Email:	csurro@gmail.com	**Place:**	Broad 2160E
Office Hours:	TBD		

Goal of the class:

This class will introduce you to many of the most important concepts in macroeconomic theory as well as connect these theories to real world applications. By the end of the course you should be able to comment intelligently on economic growth, labor market dynamics, business cycles, inflation, and macroeconomic policy.

Course Materials:

No textbook is required for this class. All necessary material will be presented in the lecture and notes. Notes for each lecture will be posted on Bruin Learn in the corresponding lecture page.

Additional readings will be posted on the class website and questions from these readings will be included in problem sets/exams.

Lectures:

Lectures for the class will be held in person. For those who cannot make a class, lectures will be recorded and posted on the course website. However, this is provided as a bonus, not a guarantee, and you should not rely on it more than necessary. Extra points will be provided for students who attend class in person.

Grading Policy:

Your grade for the class will be based on the following components:

Midterm: 250 points (or 0 points if you do better on the final than the midterm)
Final: 500 points (or 750 points if you do better on the final than the midterm)
Excel Assignment: 150 points
Problem Sets: 15 points each (Maximum 90 points) (Optional)
Quizzes: 5 Points each (Maximum 60 points) (Optional)
Attendance: 4 points per class (max 50) (Optional)

Only the final and the Excel Assignment are strictly required. Any points earned on quizzes, problem sets, or attendance will be added to both the numerator and the denominator of your final points total. For example, if you average 75% on exams and the Excel Assignment you would earn 675/900 points. Getting maximum points on problem sets, quizzes, and attendance would then earn you an additional 200 so your final score would be 830/1100 = 79.5%

Important Dates:

Problem Sets Due ..... Fridays 11:59pm
Midterm 2/9
MLK Day (No Class) 1/19
Presidents Day (No Class) 2/16
Excel Assignment Due 3/13
Final Exam 3/17

Graded Material:

Midterm: The midterm will be held in class during week 6 and cover everything covered in lecture and problem sets during the first 5 weeks. It will consist of 8 multiple choice questions and 3 open response questions with 2 parts each. The exam will be out of 250 points, 230 from the exam itself, and 20 from completing 2 post-exam surveys.

Final Exam: The final will be cumulative, covering everything in the class. Please see MyUCLA for the final exam location. The final exam will consist of 16 multiple choice questions and 4 open response questions with 3 parts each. The exam will be out of 500 points, 460 from the exam itself, and 40 from completing 2 post-exam surveys and the course evaluations (must be completed by Saturday after week 10 by 8am on Bruin Learn (Student Evaluations of Teaching))

Excel Assignment: This assignment will help you understand one of the most important models from the first half of the class (the Solow growth model) and practice your Excel skills (Google sheets will also be sufficient if you don't have Excel). More information will be provided on the details of the assignment in the second half of the class. Late assignments will lose 15 points per day. No assignments will be accepted beyond 3 days after the due date.

Problem Sets: There will be 8 problem sets in this course, due each Friday (excluding week 1 and the week of the midterm). While you will not be graded on getting the correct answer, you will lose points if you don't give an honest attempt at each question. The problem sets will include some questions based on additional readings posted on the course website. You may work in groups, but your answers should be your own (for questions on the readings, your responses must be in your own words). Problem sets are due at 11:59pm PT on the scheduled due date. No late problem sets will be accepted, but you are allowed to miss 2 problem sets with no penalty.

Quizzes: Following each lecture there will be a short quiz posted online for you to complete. The goal of these quizzes is to see how well you understood the topics in lecture and are meant to be taken before you review the material from lecture without referring back to your notes (you can always review them later). Quizzes are due before the start of the next lecture. No late quizzes will be accepted, but you can miss up to 3 quizzes and still get max points.

Attendance: Attendance in class is not strictly required and all classes will be live-streamed on Zoom and recorded and posted on the course website. However, I believe that in person attendance is the best way to learn the content of this class. Therefore, I will give a small incentive to attend in person in the form of extra points. No exceptions or makeups will be given for attendance points, but you may miss up to 4 classes and still receive the maximum attendance points (you should save these for days you are sick or have other commitments). The midterm class will not count for attendance points. To earn the attendance points for a class, you must login on iClicker (free for UCLA students) and check in. I will use the location tracking feature to ensure that you can only login if you are physically in the classroom. If your iClicker does not work one day, you must come check in with me after class *and* send me an email later that day. I will add in the credit at the end if you end up with less than the maximum points.

Practice Questions:

Each lecture will be accompanied by a short set of practice questions, which we will go over the following lecture. These questions do not need to be turned in and will not be graded. However, you are strongly encouraged to attempt them before we go over them in class. Even if you feel that you haven't quite grasped the concept and aren't totally sure how to approach the question, you will gain far more from the questions if you have given them your best shot before we go over them in class.

Additionally, practice exam questions will be provided on each topic. These are real exam questions that I have given in the past. I recommend attempting these questions only after you feel you have a solid understanding of each topic. Full written answers are provided for each question.

TA Sections:

TAs will go over the material from the previous week. Attendance is not required but is highly recommended. I will try to do many examples in class, but you will do best in this course if you have repeated exposure to the different types of problems.

You are welcome to attend a TA section other than the one you are officially enrolled in (as long as there is space in the classroom - usually not an issue).

Campuswire and Email Policy:

Please do not email me with questions about the class material. Instead, you can post your question on our class Campuswire forum (you will have to make a free account). This will allow others to see your question and prevent me from answering the same question many times. You are also encouraged to try to answer other students' questions, which can be a great way to check your understanding of class material! You may email me with personal questions. Do not use the message feature on Canvas to contact me - I will likely not respond to Canvas messages.

Exam Policies:

The midterm will be during class time in week 6 and the final will be held at the time scheduled on MyUCLA. If you cannot make the midterm, you will need to count the final as 100% of your exam score. No makeup midterms will be allowed. If you need to miss the final for a legitimate reason, you must provide me with documentation and take the department makeup exam the following week. Wanting to travel home early is not a valid reason. All exams must be taken in person. I cannot offer remote exams for any reason.

Calculators are allowed and recommended (including graphing calculators). You may also bring one 3x5 note card with handwritten notes, but cannot use anything else during the exam. You should also bring your Bruin ID and a pencil or pen.

Any students seeking disability services should register with the CAE and release accommodation letters as soon as possible. You must schedule your exam with CAE. If you miss their deadline, I will not be able to provide you with accommodations.

AI Policy:

You are encouraged to use AI tools like ChatGPT and Gemini to aid your learning in this course. However, any answer given by AI should be treated with caution. You should always double check with the source material to make sure the AI is accurately answering any question.

I also want to caution against overuse of AI. It should be used as a complement to normal study practice rather than a substitute. You will not have access to an AI on exams so if you rely on it too much when solving practice problems you may not be practicing the skills you need to do well on exams. I recommend using AI only after you have tried your best to solve a problem on your own.

For each topic, I have created a Gemini NotebookLM with AI created resources on the topic. These should be treated as experimental and not officially part of course content. Use with caution.

Academic Integrity:

Please refer to the University of California's policies on academic integrity http://www.deanofstudents.ucla.edu/Academic-Integrity. Any cheating, plagiarism, or other violations of academic integrity will be reported to the Office of the Dean of Students.

Tentative Course Outline:

Week	Dates	Topic
1	1/5	Introduction
	1/7	Measuring the Economy
2	1/12	Basic Macro Concepts
	1/14	The Solow Growth Model
3	1/19	No Class (MLK Day)
	1/21	The Solow Growth Model (Continued)
4	1/26	The Solow Growth Model (Continued)
	1/28	Two-Period Saving Model
5	2/2	Classical Theory of Labor Markets
	2/4	Midterm Review
6	2/9	Midterm
	2/11	Intro to Keynesian Economics
7	2/16	No Class (Presidents Day)
	2/18	The IS-LM Model
8	2/23	The Lucas Critique/Expectations
	2/25	The IS-MP-PC Model
9	3/2	International Macroeconomics
	3/4	US Macro History
10	3/9	Modern Macroeconomics
	3/11	Final Exam Review
Finals	3/17	Final Exam
